H2OASIS: A Weather-Smart Mobile Application for Daily Hydration Tracking and Wellness Monitoring

OASIS is a mobile hydration tracker built with FlutterFlow that helps users monitor their daily water intake. Users create an account, log their water consumption with a single tap, and track their progress throughout the day. But what makes H2OASIS different is that it's weather-smart, meaning it automatically adapts to environmental conditions and integrates with healthcare needs.

The Problem

- Students and professionals forget to drink water throughout the day
- Existing hydration apps use static "8 glasses a day" goals
- No app considers weather conditions or medication needs

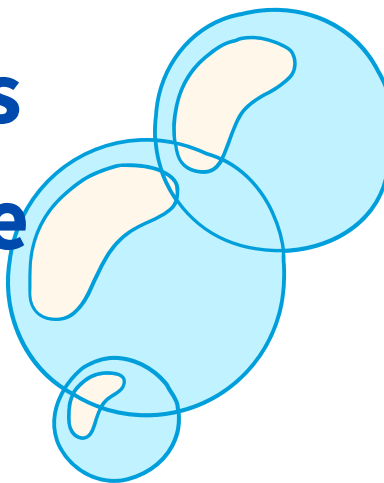

Our Solution: A Weather-smart hydration tracker with 2 unique features.

Feature 1: Temperature-Based Notifications

- Monitors weather 24/7
- Sends automatic alerts when temp spikes
- "It's 35°C! Your goal is now 3L today"
- Users warned BEFORE dehydration occurs

Feature 2: Medication Reminder Integration

- Links water intake to medication schedule
- "Take your vitamin + glass of water"
- First hydration app with healthcare integration

H2OASIS targets students, professionals, fitness enthusiasts, and individuals with medication regimens. We combine weather intelligence with healthcare features in one simple platform.

RRL

We examined recent studies 2023-2025 covering:

- Wearable hydration monitoring technology
- AI and machine learning in health tracking
- Mobile medication reminder effectiveness
- Environmental health interventions

Findings show that smart hydration monitoring works in controlled settings, but lacks translation into affordable, accessible consumer apps

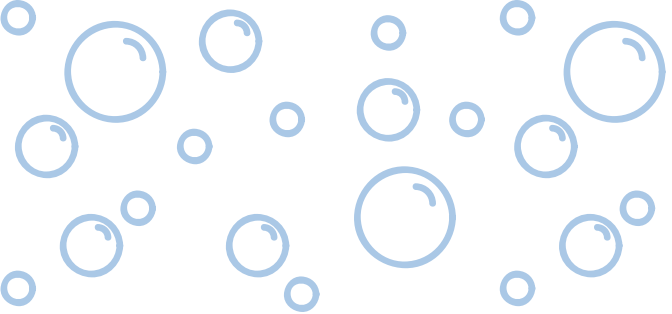

SYNTHESIS

APP

We analyzed popular hydration tracking apps:

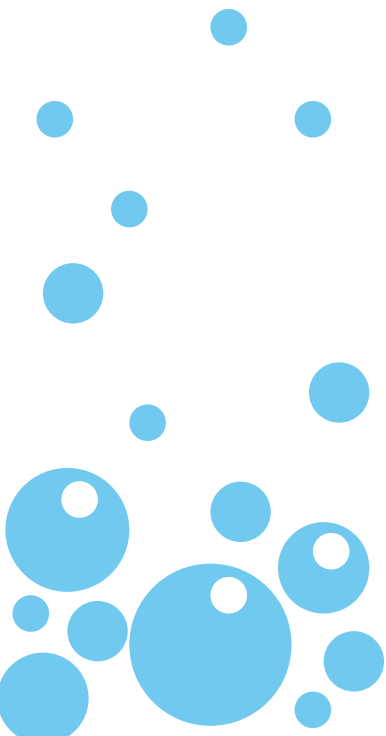

- WaterMinder
- Hydro Coach
- Plant Nanny

Most rely on fixed daily goals. Hydro Coach includes weather data in calculations, but this feature is passive—no active notifications when conditions change.

SYNTHESIS

Current apps prioritize simplicity over intelligence, while academic research offers advanced solutions that remain confined to laboratories. No existing platform successfully combines real-time environmental awareness, proactive user alerts, and healthcare integration in an accessible mobile application.

APPLICATION GAPS

Gap 1

No Proactive Weather Alerts

- Hydro Coach has weather but passive only (no notifications)
- WaterMinder & Plant Nanny = no weather at all
- Users unaware of heat risks until they check app

Gap 2

No Healthcare Integration

- All apps: hydration separate from medication
- Medical fact: proper hydration needed for medication absorption
- No unified health platform exists

Gap 3

Reactive Not Proactive

- Apps wait for users to open them
- No active monitoring of environmental conditions
- No intervention when danger emerges

Gap 4

Limited Intelligence

- Most apps: static "8 glasses" or body weight only
- Only Hydro Coach uses weather, but no real-time alerts
- Goals don't reflect actual conditions

Gap 5

Research Stays in Labs

- Advanced tech exists (AI, sensors, wearables)
- Not accessible or affordable for everyday users
- No translation to simple consumer apps

SOLUTIONS OUR APP PROVIDES

Gap 1

Temperature-Based Notifications

- ✓ Monitors weather 24/7 automatically
- ✓ Sends real-time push alerts when temp spikes
- ✓ Proactive intervention, not passive display

Gap 2

Medication Reminder Integration

- ✓ First hydration app with healthcare features
- ✓ Links water to medication schedules
- ✓ Combined reminders in one notification
- ✓ Ensures proper medication hydration

Gap 3

Active 24/7 Monitoring

- ✓ Doesn't wait for user action
- ✓ Continuously monitors environment
- ✓ Intervenes automatically when risks emerge
- ✓ Acts as health guardian

Gap 4

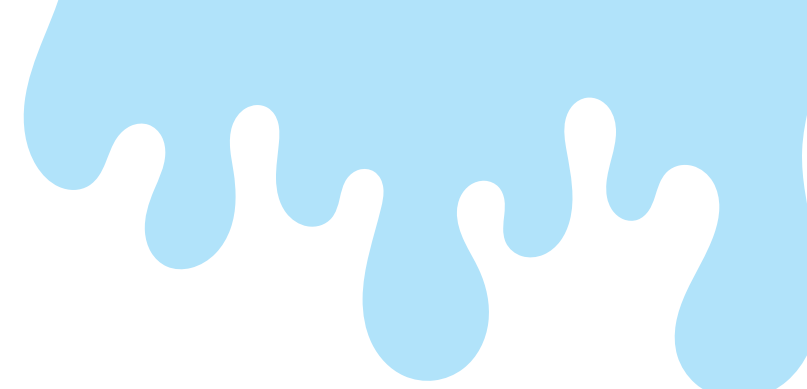

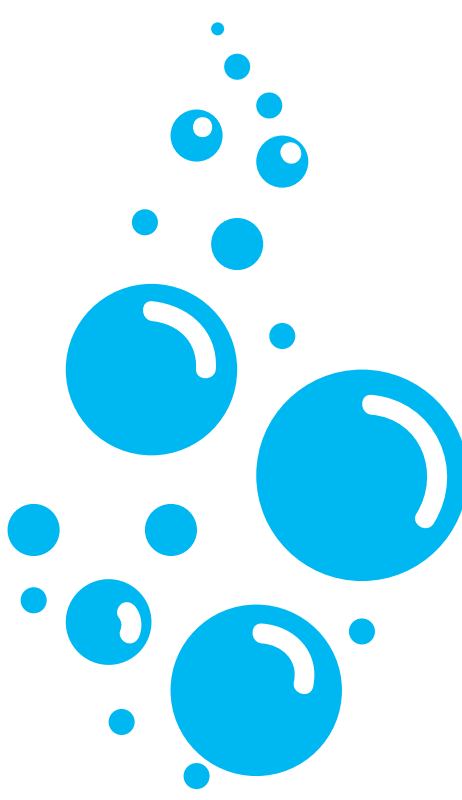

Multi-Factor Intelligence

- ✓ Combines: temperature + user history + medication + activity
- ✓ Not just "8 glasses" - context-aware recommendations
- ✓ Reflects real-world conditions

Gap 5

Accessible Technology

- ✓ No expensive wearables needed
- ✓ Simple smartphone + weather API
- ✓ Makes advanced monitoring affordable for all

We don't just track water, we actively protect health through smart, proactive intervention.

We combine weather intelligence + healthcare + proactive alert in one simple, accessible platform.

**THANK YOU
&
STAY HYDRATED!**
